

# AlcoScreen02™ Saliva Test for Alcohol

Alere Toxicology Services offers Alcohol Testing devices to detect the level of alcohol in human saliva. Alcohol Testing Products enable employers, institutions, hospitals, and clinics identify and deter the risks associated with inappropriate alcohol consumption that can be a problem in American society.

As with all of our products, Alere reviews them each year to provide clients with products that live up to Alere's high standards.

Alere's Alcohol Testing devices are manufactured by a privately held company that offers a variety of cost effective, quality diagnostic products. These products have helped define and promote early detection testing for health care providers and consumers and enhance the effectiveness of traditional diagnostic/treatment regimens by allowing earlier identification of potential health problems.

AlcoScreen02™ is a rapid, highly sensitive method to monitor for alcohol consumption. AlcoScreen02™ is so effective that it has been tested and approved by the U.S. Department of Transportation (DOT) for required testing of all transportation and safety sensitive employees for blood alcohol concentrations above the federally mandated zero tolerance level of 0.02%.

## Features:

- Simple, one-step test
- Clean, non-invasive procedure
- Requires no instrumentation, calibration or special training to be used effectively, and is convenient enough to be used any time, any place
- Results in as little as 2 minutes; maximum of 4 minutes
- No refrigeration required; stored at room temperature, not to exceed 80°F (27°C)
- Quantity per Box: 24
